too into or on unigned chars as the arguments and will return
a close value that is the feature distance between those two
IPA characters.
                                                                                                                                                              The Graitmedistrancefuls class encapsulates the feature distance table. The feature distance table is composed of the 19th characters and their feature distances stored as float wolkers.
                                                                                                                                                                                                                                                                                                                                      in feature distance_table contains the values in gracus is a generic status variable that can be checked with the age_status to furnish. If m_areaus is table then there is a problem with the table. Usually this will be due to the (dist.dat file not being loaded in property.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CFeatureDistanceTable::CFeatureDistanceTable(const_char_*fname)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       // c = ips characters
// n.mrm is some float value
// n.mrm is some float value
// the float begin at position 5.
// the float begin at position 5.
// remeter this is c o- and arrays start from 0.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GENVAR 1. CRP 3-24-98 11:24a
function to generate the consonant variants for a name using the cult as set.

I placed this code in a separate file so that .

I could use optimization, which causes a problem with the rest
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The truncion parameter can be used to truncate values. Any deplicates caused by such trunction are discarded. A truncion of 0 indicates that no truncation should occur.
                                                                                                                                                                                                                                                                                                                                                                                                                                         name can be a regular expression (in which case translate/dem und be PALSE), or just a string that needs to have rules applied it (in which case translate/dem abound be TAUE). If we are nolating, the name will automatically be surrounded by spaces
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The devowel flag, when TRUE, indicates that wowels should be removed from the generated variants. Again, any duplicates caused by such modification are discarded.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   tds_vargen_code_trr)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   spacedkame [1000];

Lear the file and get the file size
from that. It we are loading into memory,
use sizeof(unsigned int) to determine the many offeres there are those many unsigned into electronic to many offeres there are those many unsigned into a service and allocate space for).

It we are not loading into memory, then we should note the final offere so that we do not attempt to seek or read past that the file are should be evenly divisible by the size of unsignal into.

Note that the file are should be evenly divisible by the size of unsignal into.

Note that (for gone reason), the code below will not compile unless pre-compiled headers are turned off.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GroupkingOffsetVectors: GroupkingOffsetVectors(const_char_fileHans, bool useMentry)

function to fill in an array of unsigned char (byte values)

Page 1 of 17

```
Check for context variables. The output of a rule can contain // variables like $1 meaning the first letter matched in the match // context this variable is simply replace by the letter before it // is attached to the output string. Otherwise the output is con-// cutuated as-is.
                                                                                                                                                                                                                                                                           // The main working method for the Raisfast class. Furbable() is passed
// an name locath and an index into it and it firsts a rule which passes
// all the contexts for that lamber (letter). The output is than added
// to the recum string parameter. If no rule is found for a letter than
// the lowerscale form of the letter is added to be recum string. The actual
// the lowerscale form of the letter is added to be recum string. The actual
// the lowerscale form of the letter is added to be recum string. The actual
// the context form of this routine. Interest replaced
// the context of the context portions of other rules. Since
// the canning of a ward proceed left to right only one match context of a rule
// applies to any letter.

The rules define silent as () sometimes.

However, () is not a valid regular expression, either by itself or when used as part of a larger regular expression. We therefore have special code to translate it to an entry string.

Name special code to translate it to an entry string in this seeds to have some sort of token for each output string, rules seeds to have some sort of token for each output string, and a Mill. work work (MILL is not a token). In alternative to this RILDE is to:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Replace the '()' in the rules with MAIL (''). Then either changed the code that reads in the simplified rules to ver off of position instead of todens, or assign a special codes for salest (just in the simplified rules).

// corpy the value into a separate buffer

// fire value could be a quoted value (possibly with enchander spaces),

fire value could be a quoted value (possibly with enchander spaces),

or a single string value (intout spaces). We must therefore see it

// was a single string value (intout spaces). He must therefore see it

// was a single string value (without spaces).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               value starts just past the SET.

// get rid of leading whitespace
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          :
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      since we already stipped this before we care into the function, the first white space is the white space between the SST and the spreol. We have already checked for the set, so we can begin at the fourth character.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         // This method parses a Sot command from the input file and adds the symbol to the Symbol map. A part command is imply three columns delimited // by white space. Set everiable names "estring"s. This is a simple implementation of the tule grammer if the nules become more complicated // an actual grammer generator (like yace) should be used.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        // and a symbol manually from the two parameters. This function can // be used to hard code symbols into the rule set. Currently all symbols // are added from the rule sets.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          bRet = FALSE;

```

Essentially we are compiling Although we could compare citing it to the stream and as the name search, making this

// here is a string based stream (instead of a file based ons). En // a database of one name (in second) and obtaing a query on it. Ald // the compiled Offs object citrectly we don't. Instead, by virting // drecking the stream we are uning the coact same functions as the .// function a good test of the name search.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       and a parallell vector of regax codes - registrokelec.

we use these to plack to original rudes in the rules set and assign the regax code to the nutescen's member variable m_registrokelec. This is necessary because the variable m_registrokelec. This is necessary because the large is not in the same noter a to the rules in the rule set. We use the replacement/ge/Scrimpkrive to find the rule we are looking for, and thon assign
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               it to (vecIndex)

Page 13 of 17

Each match results in two points being added to the total. The final score is the total marber of points divided by the number of digraphs that could have matched.

The routine ensures that a digraph can only participate in a

```

Seen have furings in the replicitings wettor that are not m_Bales wettor; since the replicitings wettor that are not m_Bales wettor; since the replicitings wettor that the set is only for one culture. Suild a wettor that set is easyly for one culture. Build a vector that the parallel to the m_Bales wettor that contains the simplified regar for each rule. This will be similar to the simplified regar for each rule. This will be signified to be in the mane order fand the same size as) the m_Bales wettor.
                                                                                                                                                                                                                                                                                                                                                   /// create a vector of Catrings for the replacement strings as read from
/// the simplifiedDatesFile.
/// Also, create a paralel vector of Catrings for the simplified
/// replacement strings as read from the simplifiedDatesFile.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          outile << "cobell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickell\thickel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      function to read the applied (lie of simplified notes and

1.) Busine that the replacement estimps in the simplifies

2.) Create a vector of vector of codes (unsigned char).

2.) Create a vector of vector of codes (unsigned char).

2.) The simple vector contains the codes corresponding to a particular rule. The cuter vector contains the linear vector contains the new tore contains the inner vectors, and corresponds (should be in the same order as vector, when you of rules to the majouter vector.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PARSE.CPP 3-24-98 11:24a

of the two names, and is calculated based on the number of bytraes and
single character which match between the two given strings.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    float rc = 0.0f; // very far away float min_diff = 1.0f; // very far away since this is the compliment

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  F is one vewal.
Final ES 4 do not count, so Marres is one, not two syllables.
But the exceptions to the ES rule are CES, GES, NES, SES, NES and EES.
Its vawels implies one syllable.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Final E's do not count, so Alice is two, not three syllables; but a single

!(*p == 'E' && *(p + 1) -- 'S' && *(p + 2) -- '\0')
Pacture a value in [0.0, 1.0] representing how close the syllabilitization errorizour is between technical and in the count difference, where each the scott is derived from the syllable-count difference, where each syllable difference counts as 0.2, down to a minimum of 0.2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              / count_syllables / Counts the number of yowels or yowel Counts the number of yowels or yowel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sequences.

The second is a simple vowel/dipthong count on the spalling of the name; this is sufficient, since we don't need to know where the syllables are, only a count of them.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             // always count a wowel at the beginning of the name
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      // If we end in ES and that is preceeded by C, G, N, S, X or 2, // we actually want that last count: If (p - function to remove leading and trailing spaces from a string

'tds\_util.h'

#include

«string.h»

tunction to remove leading and trailing spaces from a striit in place.

| Strip the string at either end or both ends.
| Stripchuse specify the characters that should be stripchuse specify the characters that should be striping. We start by ceeding if they want by the trailing characterises and teating. However stripped, which is easy, we simply next into place and stripply locking for the first one-strippable character. Then if they wanted string just past that character. Then if they wanted the inter one-strippable character. Then if they wanted he is placed to the strip one-strippable char, and then move that and each following | character the strip in character the strip in character the strip in character the strip in character the strip in the strip in the strip of the strip |

The pre-trained relations are prefety straight forward, since we can be just offect the value of the prefetshershifted which and one of the latest strained to the Rawket Heevert, the post runder operation is many conjusted, because it involves the use of two landers - a Par Enwist that goes the initial pool, and a final runder that received the names from the Par Enwist Information and all and trained (unamily lower). The Part Enwise is initially higher affictent threshold (unamily lower) and have heave is initially inject; and enter when the case cot and name names that unamily linguist; since we do not work out to appear out any names that unget core or creatively high after their edit distance is adjusted.

We choose the design of a Par Rawket and Flank Rawker to that the Rawker does not read to be concerned flows knowledge of) the PB Bilt Distance calcustion and all of the responding that goes along with it (Rales, etc.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             here we need to examine the culture setting the user has aperitied on the GII. If they have said they want a particular culture, we abould search that culture and MGIM. If they did not specifically request a culture, we should search MRID and the culture the classifier comes up with for the name. Since the classifier might decide the name is not any of the other culture, we might end up searching only MGIM.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              // clear out the Barker object ranker large auxiemesThatecumber(Auery, ranker, init (ExcRème (), ExcRème (), "rankerParme, moutement large (easured) is taken entitle (e);

map(ter - names)4p, begi we can skip alot of query name processing, since that was already done. Look at all the groups, rather than using a binary search. We blook at all the groups, rather than using a binary search are not we not at needs we do an edit distance rather than an exact promettic metch comparison. Note that we use the final ranker here no matter what, because exact matches do not need to have their edit distance adjusted. Therefore we can go straight to the final ranker with them. now we have done exact lookups for both cultures so we should go through the spot of Nemekacords and send the information to the Ranker.
Each Nemekacord in the engo can represent 1 or two cultures. It is now represents two cultures, we read to send both sets of into the separate broughters, we read to send both sets of into the separate brothers. \*logstream << "Processing stopped due to errors" << endl; \*logstream << "Exact Match Search Completed" << endl; tunction to do the second phase of the query. This involves searching introget each record in the group filts an particular particul After we have done this for the cultures we are suppose to, we go through the NambScord map, and tell each immeRacord to submit itself to the Bankor. However, since the NambScord map along itself contains couch matches, we should make sure we skip those. similarMacchOffsetIter; Note that the code for this function is very similar to the so it can decide which one is better. man3roupsThat PassedGroupEdit LDist; TDSSearcher::searchforSimilarMatches() e\_cds\_culture set.unsigned int> set.unsigned int>::iterator if (logstream !\* MALL) {

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    tead the name entry from the file for the specified culture and check to see if we should abt in to our list.

This method is called both from the exact match and similar match sauches. The method used to evaluate the name is different for each search type. For the Exact metho, we should use fib 70 into 10 determine search in the name is an exact phonesic match with the query. For the Shmiars exact, we pass the name's SEC string, along with the query's SEC string,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TDSSEA 1.CPP 3-24-98 11:24a
